#### Exercise 12.1

## Question 1:

The radii of two circles are 19 cm and 9 cm respectively. Find the radius of the circle which has circumference equal to the sum of the circumferences of the two circles. Answer:

Radius  $(r_1)$  of  $1^{st}$  circle = 19 cm Radius  $(r_2)$  or  $2^{nd}$  circle = 9 cm Let the radius of  $3^{rd}$  circle be r. Circumference of  $1^{st}$  circle =  $2\pi r_1 = 2\pi$  (19) =  $38\pi$ Circumference of  $2^{nd}$  circle =  $2\pi r_2 = 2\pi$  (9) =  $18\pi$ Circumference of  $3^{rd}$  circle =  $2\pi r$ Given that, Circumference of  $3^{rd}$  circle =  $2\pi r$ Given that, Circumference of  $3^{rd}$  circle = Circumference of  $1^{st}$  circle + Circumference of  $2^{nd}$  circle  $2\pi r = 38\pi + 18\pi = 56\pi$ 

$$r = \frac{56\pi}{2\pi} = 28$$

Therefore, the radius of the circle which has circumference equal to the sum of the circumference of the given two circles is 28 cm.

## **Question 2:**

The radii of two circles are 8 cm and 6 cm respectively. Find the radius of the circle having area equal to the sum of the areas of the two circles.

Answer:

Radius  $(r_1)$  of  $1^{st}$  circle = 8 cm

Radius  $(r_2)$  of  $2^{nd}$  circle = 6 cm

Let the radius of  $3^{rd}$  circle be r.

Area of 1<sup>st</sup> circle 
$$= \pi r_1^2 = \pi (8)^2 = 64\pi$$

Area of 2<sup>nd</sup> circle  $=\pi r_2^2 = \pi (6)^2 = 36\pi$ 

Given that,

## **Question 5:**

Tick the correct answer in the following and justify your choice: If the perimeter and the area of a circle are numerically equal, then the radius of the circle is

(A) 2 units (B)  $\pi$  units (C) 4 units (D)7 units

Answer:

Let the radius of the circle be r.

Circumference of circle =  $2\pi r$ 

Area of circle =  $\pi r^2$ 

Given that, the circumference of the circle and the area of the circle are equal.

This implies  $2\pi r = \pi r^2$ 

2 = r

Therefore, the radius of the circle is 2 units.

Hence, the correct answer is A.

Answer:

Let OACB be a sector of the circle making 60° angle at centre O of the circle.

Area of sector of angle  $\theta = \frac{\theta}{360^{\circ}} \times \pi r^2$ 

Area of sector OACB =  $\frac{60^{\circ}}{360^{\circ}} \times \frac{22}{7} \times (6)^2$

Maths

Answer:

We know that in 1 hour (i.e., 60 minutes), the minute hand rotates 360°.

$$\frac{360^{\circ}}{60} \times 5 = 30^{\circ}$$

In 5 minutes, minute hand will rotate = 60

Therefore, the area swept by the minute hand in 5 minutes will be the area of a sector of 30° in a circle of 14 cm radius.

Area of sector of angle  $\theta = \frac{\theta}{360^{\circ}} \times \pi r^2$ 

Area of sector of 30° =  $\frac{30^{\circ}}{360^{\circ}} \times \frac{22}{7} \times 14 \times 14$

Therefore, area of designs =  $6 \times \left(\frac{1232}{3} - 333.2\right) \text{cm}^2$ 

$$= (2464 - 1999.2) \text{ cm}^2$$

Cost of making  $1 \text{ cm}^2$  designs = Rs 0.35

Cost of making 464.76 cm<sup>2</sup> designs =  $\frac{464.8 \times 0.35}{1000}$  = Rs 162.68

Therefore, the cost of making such designs is Rs 162.68.

Answer:

We know that area of sector of angle  $\theta = \frac{\theta}{360^\circ} \times \pi \ R^2$ 

Area of sector of angle P = 
$$\frac{p}{360^{\circ}} (\pi R^2)$$

#### Exercise 12.3

Question 1:

Find the area of the shaded region in the given figure, if PQ = 24 cm, PR = 7 cm and

Answer:

It can be observed that RQ is the diameter of the circle. Therefore,  $\angle$ RPQ will be 90°.

By applying Pythagoras theorem in  $\Delta PQR$ ,

 $RP^{2} + PQ^{2} = RQ^{2}$ (7)<sup>2</sup> + (24)<sup>2</sup> =  $RQ^{2}$ 

 $RQ = \sqrt{625} = 25$ 

Radius of circle,

 $OR = \frac{RQ}{2} = \frac{25}{2}$ 

Since RQ is the diameter of the circle, it divides the circle in two equal parts.
